# Easy Virtual Drug Test Helps People Get Back to Work

## Easy to Use

Leverage a quick and easy-to-use candidate or back-to-work drug test option ideal for customers eager to expedite their return to business as usual following the COVID-19 global health crisis. Our virtual drug test offering\* is performed by a simple mouth swab collection and reading that can be conducted over video chat with your candidates or the employees your organization is ready to bring back to work.

Just ship the device to your candidate or employee, schedule a video chat (Skype, Zoom, etc.) with your wellness or HR team member and have him or her observe the individual taking the non-invasive oral test to determine if the candidate or employee's test is negative.

## Fast

A few instructions are included with the test and made available online for a seamless user experience. The test takes about two minutes to complete and the results can be reviewed live via video conference.

If the screening test results read negative, no further action is needed, and the individual can be considered ready for work. If the test results read presumptive positive or inconclusive, the employee or candidate will need to visit a drug testing facility in person to provide a urine sample.

**100%**  
**Conducted virtually**

## 12 Drugs detected including:

- Amphetamines
- Cocaine
- Marijuana
- Methadone
- Methamphetamines
- Opiates
- Oxycodone
- Phencyclidine

**142% increase**

in online sales of marijuana since  
COVID-19 shelter-in-place orders  
went into effect<sup>1</sup>

1 e-commerce platform Jane Technologies March 2020

# Easy Virtual Drug Test Helps People Get Back to Work

This innovative solution not only addresses the need to get people hired or back to work quickly, it also eliminates the significant time delays that can come with lab scheduling and travel time.

Easily ensure your employees and candidates are ready to work while limiting the risk to your business and your brand with our virtual drug test offering.

## OralTox®

- FDA 510(k) cleared
- Changes color on “Saturation Indicator” when sufficient oral fluid is collected without any mess!
- Detects up to 12 drugs simultaneously
- Magnifies results in the crystal-clear container window
- Shows negative results in as little as two minutes
- Can be sent to laboratory for confirmation of inconclusive results (no need for a second sample)
- Provides a unique QR code tied to device
